

Test It Live via Satellite

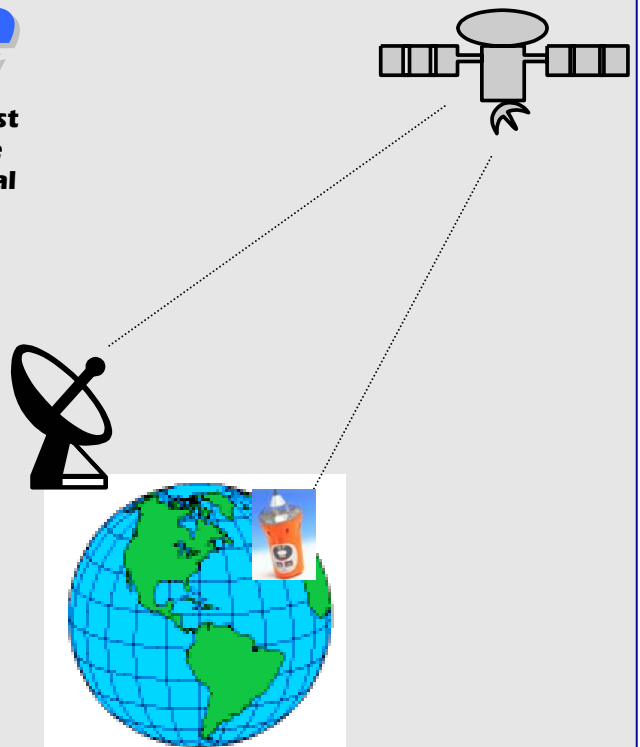

- ✓ Live SARSAT Beacon Testing via COSPAS-SARSAT Satellites
- ✓ Test All 406MHz Beacons – McMurdo/Pains Wessex, ACR, NAT, and Others
- ✓ Fast, Simple Tests Results via Internet, Telephone, or Fax
- ✓ Anywhere, Anytime
- ✓ Printed Confirmation of Test Results

Don't take chances. Before you set sail, make sure your EPIRB works correctly. Standard test procedures provided by beacon manufacturers *do not* test the signal via satellite.

Beacon*Sure*

confirms your beacon is working by sending a live test signal via the COSPAS-SARSAT system, the very same satellites and receiving equipment used to detect real distress signals.
